Providing All Your Pest Facts

Brown Banded Cockroach

Male Brown Banded Cockroaches are fast flyers but the females can't fly.

Females deposit egg capsules in clusters on furniture, draperies, shelving, wall decorations and ceilings. The egg capsule usually contain 14-16 eggs and females can produce 10 to 20 capsules in her lifetime. They commonly eat starchy materials and are nocturnal. Both males and females can jump. If you find cockroaches high on the wall in a bedroom they are most likely Brown Banded Cockroaches.
